# Tech Helper

## Introduction:

Tech Helper is a web-based application where a developer can easily find the solution to his problem and can also help other developers to find their problem's solution. A user will get some points if his answer is effective to the person who has asked for that question. On the other hand, a user needs to have some point in his account to ask for a question.

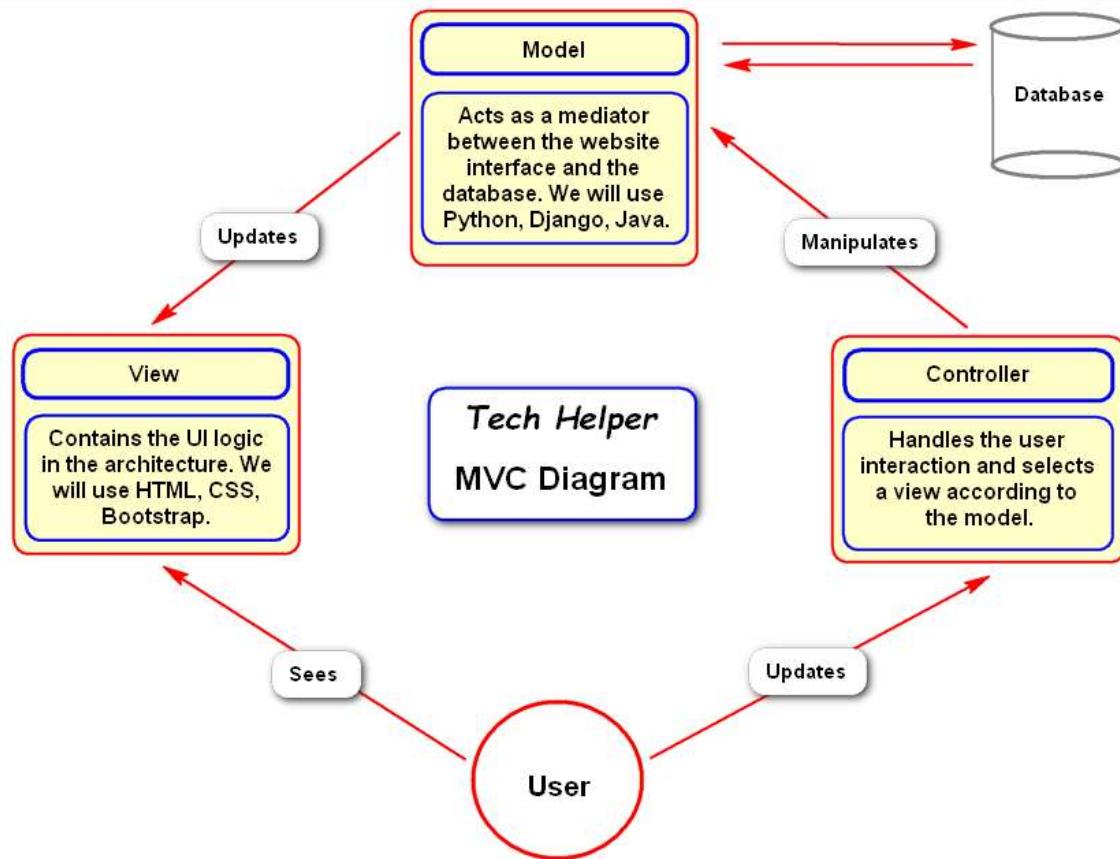

We will specify every question with a subject-wise common tag and each user can update his profile's specialism by these tags. If a user faces a problem and asks for help in this system, the online specialist of this specific tag can help by giving his important discussion and get some points as a reward. When the specialist answers a question, the person who asked for that question will get a notification email.

A user can also post for an internship post or job vacancy. For each post some points will reduce from his or her account. A user can also apply for that job or internship from the website.

As the whole system is running on points, so it is normal that a user can suffer from a lack of points. At that moment, a user can purchase points from that system to use as he wants. A user can also contact with the admin users if they face any problem.

The main purpose of this system is to relieve the developers who have been stuck in a problem for a long term. Moreover, we want to create a friendly community among developers from all over the world with the motive of helping each other.

## System Models:

## Functional Requirement:

- This system will provide question & answer sessions among developers which is an educational service.
- Each user must log in with this personal login credential.
- Each user will get a unique email whenever he created his account in the system.
- Users can find their problem's solution from the timeline or can ask for a question, or he can answer someone's question.
- For both asking or answering questions, there will be a matter of points.
- Users can also purchase points if needed.
- There will be a section of the job vacancy or internship.
- There will be a feedback option to contact with the admin panel.
- There will be a service of email notification.

## Non-functional Requirement:

- We must ensure the security of the whole system first that a non-authenticate user couldn't access the system's core features.
- A user can't change his email for the whole lifetime. He or she can only change the password and the password will store in the database as encrypted.
- If a user provides the wrong password more than three times his account will be disabled, and he must enable his account by a link that will automatically send to his email account.
- We must also ensure that a question quality and admin can ban a user depends on his activities.
- A normal can't access to the admin panel at any cost.

## Technologies:

We will use **Python (Django)** to develop this system because python is a very secure language and easy to use. For designing, we will use **HTML, CSS, JavaScript, Bootstrap**. We will use **Xampp Control Panel** as a server because it is a locally created virtual server in which we can easily **Apache MySQL** server for our project. Moreover, Xampp is free of cost and easy to use.

**Flutter ListWheelScrollView.useDelegate Make Auto Scroll for few seconds**

Flutter

 Md. Sabik Alam Rahat

Sept. 8, 2021, 12:44 a.m.

I want to add an auto scrolling system in flutter ListWheelScrollView.useDelegate for few seconds. My ListWheelChildLoopingListDelegate is generating a loop of infinity widgets.

Is it possible to scroll this loop for few seconds by clicking on a button?

My Code is here:

```
return Container(
  height: 125,
  width: ScreenSize.width * 0.3,
  child: ListWheelScrollView.useDelegate(
    diameterRatio: 1,
    squeeze: 1.8,
    itemExtent: 75,
    physics: FixedExtentScrollPhysics(),
    onSelectedIndexChanged: (index) => print(index),
    childDelegate: ListWheelChildLoopingListDelegate(
      childItems: List.generate(
        slotNames.length,
        (index) => Padding(
          padding: const EdgeInsets.all(3.0),
          child: Container(
            decoration: BoxDecoration(
              border: Border.all(
                color: Colors.blue,
              ),
              borderRadius: BorderRadius.circular(10.0),
            ),
            child: Image.asset(
              "assets/$index.png",
              width: double.infinity,
              height: double.infinity,
            ),
          ),
        ),
      ),
    ),
  ),
)
```

At Tech Helper, accessible from <http://127.0.0.1:8000/>, one of our main priorities is the privacy of our visitors. This Privacy Policy document contains types of information that is collected and recorded by Tech Helper and how we use it.

If you have additional questions or require more information about our Privacy Policy, do not hesitate to contact us.

This Privacy Policy applies only to our online activities and is valid for visitors to our website with regards to the information that they shared and/or collect in Tech Helper. This policy is not applicable to any information collected offline or via channels other than this website. Our Privacy Policy was created with the help of the [TermsFeed Privacy Policy Generator](#).

### Consent

By using our website, you hereby consent to our Privacy Policy and agree to its terms.

### Information we collect

The personal information that you are asked to provide, and the reasons why you are asked to provide it, will be made clear to you at the point we ask you to provide your personal information.

If you contact us directly, we may receive additional information about you such as your name, email address, phone number, the contents of the message and/or attachments you may send us, and any other information you may choose to provide.

When you register for an Account, we may ask for your contact information, including items such as name, company name, address, email address, and telephone number.

### How we use your information

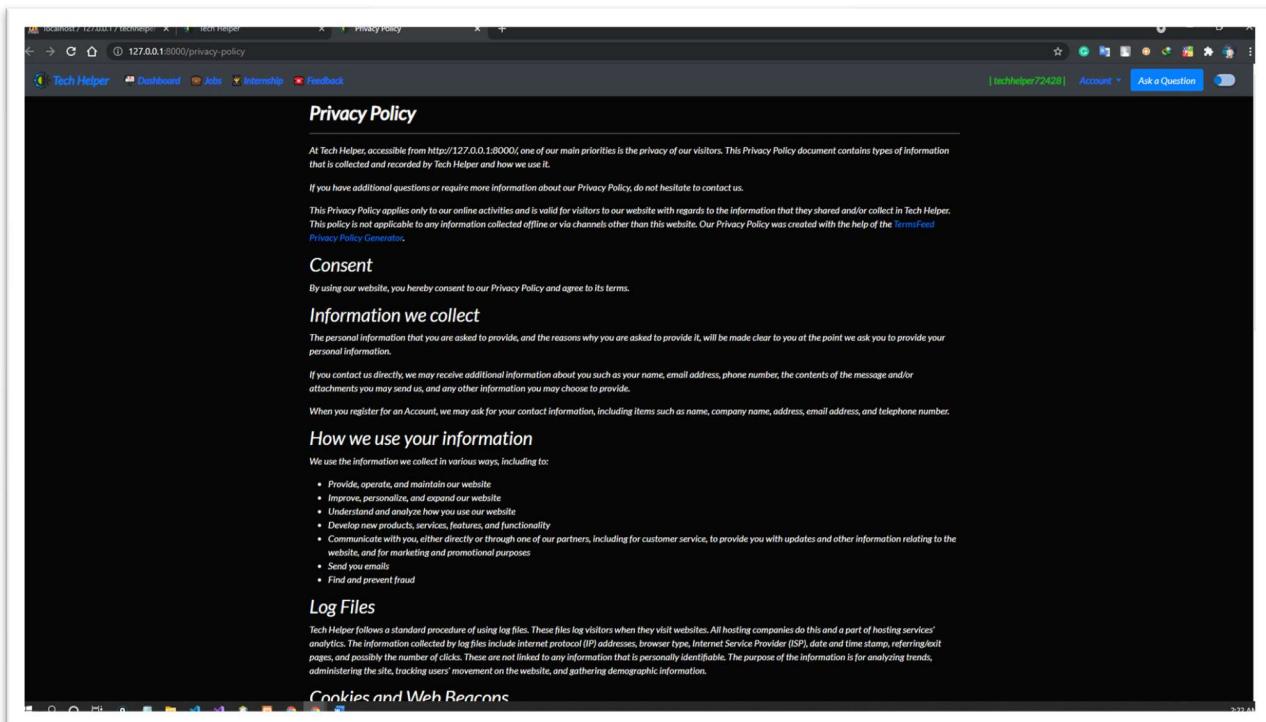

We use the information we collect in various ways, including:

- Provide, operate, and maintain our website
- Improve, personalize, and expand our website
- Understand and analyze how you use our website
- Develop new products, services, features, and functionality
- Communicate with you, either directly or through one of our partners, including for customer service, to provide you with updates and other information relating to the website, and for marketing and promotional purposes
- Send you emails
- Find and prevent fraud

### Log Files

Tech Helper follows a standard procedure of using log files. These files log visitors when they visit websites. All hosting companies do this and a part of hosting services' analytics. The information collected by log files include internet protocol (IP) addresses, browser type, Internet Service Provider (ISP), date and time stamp, referring/exit pages, and possibly the number of clicks. These are not linked to any information that is personally identifiable. The purpose of the information is for analyzing trends, administering the site, tracking users' movement on the website, and gathering demographic information.
